

If your child is in daycare, they need extra care from you.

**Children, especially those in group settings,
have greater exposure to the flu viruses.**

Which puts them, and your family, at a higher risk. So make sure your preschoolers get their seasonal and H1N1 flu shots right now.* You'll be protecting the ones you love, and giving your little ones the extra care they need.

For more information, ask your health care provider or pharmacist, call 2-1-1 or visit [**www.FightTheFluLA.com**](http://www.FightTheFluLA.com).

A message from the Louisiana Department of Health and Hospitals.

* Children under six months are unable to receive flu vaccines. So for their protection, make sure you and other caregivers get them right away.
